

Housekeeping Notes

Drink plenty water

It is vital to drink plenty of clean water (no tap) to support kidneys and lymphatic flow. You should be drinking about half of your body weight in ounces of water every single day. It's recommended to aim for one gallon per day. Depending on your weight, you may need less or more. This keeps things moving and less stagnant. You *do not* want stagnancy. You may also include your teas or raw juices as part of your daily hydration.

Plan to eat well

The diet in this protocol is not entirely vegan or vegetarian; however, there are modifications for those who are abstaining from animal protein. In this protocol, you'll be consuming lots of whole foods. If you prefer to refrain from meat, poultry, and/or fish then you can have high amino acid vegetable substitutes like lentils, chickpeas, artichokes, and quinoa. You may also consume milk during your cleanse, but it must be grass-fed, raw, unprocessed milk if it's accessible to you. Otherwise, skip the dairy.

Say no to junk

Eliminate processed food, alcohol, and refined carbs and sugars. Avoid all inflammatory, refined seed oils such as vegetable oil, soybean oil, corn oil, sunflower oil, safflower oil, cottonseed oil, grapeseed oil, and canola oil as these have excessive omega-6 and trans fats. Healthy substitutes are unrefined coconut oil, grass-fed ghee, butter, or tallow, high quality extra virgin olive oil (EVOO), and high quality avocado oil. EVOO should *not* be exposed to high heat cooking. Do your due diligence and research their smoke points. Any healthy oil can become inflammatory once you exceed their smoke points when cooking. To keep things simple, focus on the healthy fats that are easiest for you.

Avoid all processed sugars. If you must have sweeteners, then natural ones like raw honey, date sugar or syrup, fig syrup, and pure maple syrup (*not* pancake syrup) are totally fine. To avoid blood sugar from spiking, have some healthy fats or protein first, like a palmful of nuts, cottage cheese, etc. Overall, try to limit the excessive use of sweeteners as much as possible.
