

- **Liquids (Hydration and Gut Health):** Water, bone broth, aloe vera juice, okra water, coconut water, and raw milk. Dairy is completely optional.
- **Probiotic-Rich Foods (for Gut Health):** Kimchi, sauerkraut, apple cider vinegar, fermented fruit beverages, raw dairy kefir, etc. to replenish the gut with good bacteria and increase gut acidity to fight off pathogens.

Herbs

- **Milk Thistle:** Protects the liver and boosts Phase I and II detoxification.
- **Dandelion Root:** Stimulates the gallbladder for bile flow and acts as a gentle diuretic for the kidneys.
- **Burdock Root:** A potent depurative (blood purifier) that improves digestion and aids in metabolic waste removal.
- **Turmeric:** Contains curcumin, which supports phase II liver detoxification and reduces inflammation. Enhance its absorption with a healthy fat like ghee or coconut oil and a dash of black pepper.
- **Red Clover:** Supports lymphatic flow to move waste.
- **Peppermint:** Aids digestion by relaxing the muscles of the gastrointestinal tract.
- **Ginger and Fennel:** Stimulates bile production and helps combat liver oxidative stress and inflammation.
- **Oil of oregano:** Powerful antifungal, antibacterial, and **antiviral** polyphenol to break down viral protective layers. This is the star in this protocol.

Please note that each food category is not a complete list. You are not limited to these options. Feel free to add or substitute alternative foods that fall into each category that you are more comfortable with or have on hand and can be consistent with. For example, bok choy is a cruciferous vegetable. It is not listed above but you are more than welcome to include it. Continuously reference the above food categories throughout the entire protocol.

Grocery Shopping Guide

The list above is to be used as a general guide; however, each food category is important. In other words, you can substitute other foods that qualify for each category. You are not limited to just those foods. Try as best as possible to eat seeded, grass-fed, pasture-raised whole foods that are not genetically modified (non-GMO). You need to have a colorful array of whole foods. It's understandable that this may be challenging to achieve but please do not allow that to deter you. Stick to the plan. Remember why you're here. You can heal. The easiest way to shop for groceries is to review the categories above and shop for the things that work for you. Please note that you can add more options to each category. The listed options under the bitter greens and herbs category, for instance, are nutrient dense and serve the purpose of that category; however, you are free to do additional research to find more variations that you can add to your diet.
